

Protect in
summer; slide
away in winter.

Auto Guide Awnings

You want your home protected from the harsh summer sun, and anything you can do to cool your home and reduce your energy costs is going to be a smart move. The simple installation of awnings will go a long way towards preventing the heat transfer that happens through your windows, which can represent over 30% of unwanted heat gain in summer.

The simple operation of these awnings is one of their best selling features, because the blind can be raised and lowered by simply sliding the arms on the guide rods. The fabric sits close enough to the window to shield it, but still allows enough space for air flow to occur so you can still benefit from any cool breezes. In winter when you want to let the sun in to warm your home, or when there is the possibility of strong winds or threatening storms, simply raise the blinds.

Innovations in fabrics mean you can mix and match colours to coordinate beautifully with your exterior, so your awnings will add to your home's appearance. They can also add value to your property, making it more efficient and more comfortable to live in. Choose from a range of fashion colours, stripes and textures. Available in poly-cotton canvas, acrylic or mesh fabrics, there is also the option of matching hooding to provide the finishing touch to your awnings.

INCREASE YOUR ENERGY EFFICIENCY.

You'll notice how quickly the sun heats up glass windows in summer, so it makes sense to reflect the sun away before it has a chance to hit the glass. Stopping this heat transfer will save you money by reducing your reliance on air conditioning.

- PROTECTS YOUR WINDOWS FROM HEAT AND GLARE
- HELPS COOL YOUR HOME
- LETS IN COOL BREEZES
- HUGE COLOUR AND FABRIC CHOICE
- ADDS TO PROPERTY VALUE AND APPEAL
- HELPS REDUCE ENERGY CONSUMPTION
